

S O NAH

S O NAH

- S O NAH developed an optical sensor platform which can be trained to solve urban challenges like increasing parking pressure and traffic combustion.
- On the basis of our generated data, we optimize traffic flow and increase parking revenue.
- Due to the nature of our technology, our sensors can be extended to analyze any distinct visual feature and thus digitize the world around us.
- Join us, to create the infrastructure and data economy of our future smart cities!
